1. Anonymous VPS

Source: Anonymous VPS hosting

When you setup a VPS with a VPS provider you will not be anonymous since you need to hand over payment details and can therefore link your identity to the IP address they give you to use. If you would then host a VPN on your VPS then they would have access to all your traffic data. Now, you can never be 100% sure if a VPS does not keep logs but for instance signing up without providing identifiable credentials is the best you could possibly do. They can still log in theory but then at best could suspend your VPS but not identify you personally.

In this chapter we look at some "anonymous" VPS providers
